

VIARPROFIL
FORMS THAT FIT

Short guide and useful ideas to profiles used for floor and wall coating.

What's good about VIARPROFILES!

What does the VIARPROFIL mean?

If you build or rebuild, the profiles only take out a small part of the construction. But they are just as important as everything else. You can find many different profiles on the market. Customers try to find the best, the most acceptable product, usually they have a hard time to pick the best.

Here are some good thoughts to find the right one for yourself:

We have been working in the profil business for many years. Our high quality products are based on the many years experiences and the continuous developments. Our own design and production is the best warranty and commitment for you. They are on view in every products.

For the costum-designed products we always try to give you something new.

Please look at our supply and choose the right for yourself.

The eternal favourites

These are the basic profiles for the corners.

They are made of aluminium, copper, stainless steel and also PVC in case of the curved tile profiles, which are sold in 23 different colours. The aluminium profiles are treated by silver, gold, bronze anodising, chrome polishing and powder coating.

The curved and angled profiles save the edges of the tiles, they fit well inside and outside too. They are resistant to all the weather and UVB radiation. The angled „L” profiles are the best joints between the different covering materials. Or if you don't have enough space to finish the sides or the edges (at joint of the ceramic and carpet). You can also use them to decorate. The wide range helps you to find the right size for yourself.

Our metal profiles are also available in flexible type.

BODYGUARDS of the stair edges

If you want to use stair profiles, you must decide first: Should it be a constructable or a posterior profile, rounded or square edge, which colour and surface treatment would fit better for the planed floor covering.

The upper part of the stair profiles is knurled to guarantee a non-slip surface!

The stairs won't be only nicer, but they will be more safe and undamaged too.

The self-adhesive non-slip strips are absolutely indispensable, especially in winter time on the slippery stairs.

We can offer them in black, grey, transparent and black-yellow colours.

The blend of the elegance and the quality

The newest surface treatment decoration profiles open up the new generation of the profiles in the XXI. century. People who look for exclusivity, shouldn't miss these.

Atmosphere and beauty of the brushed, satined, polished, chromed, titanium, copper anodised aluminiums perfectly complet the style of the ceramic, textil, plastic and wood coverings.

These constructable decoration profiles are suitable to create horizontal and vertical lines on wall surfaces, even to separate tiles or for mirror frame.

Balcony profiles - because the water guides...

The tiles can easily freeze and crack if rainfall goes under it. And this could make lots of damages on the walls of the house, the way the water runs down and leaves stains behind it. Due to the shape of the balcony profiles they divert the water, they close the ends of the balcony so the house won't be damaged.

They are available in natural, silver and bronze anodised aluminium.

Our 8 and 10 mm natural aluminium balcony profiles are also available in FLEXIBLE type.

Corner filler band

Its use is indispensable for the hermetic, water- and steam-proof finishing at the corners, joints and at the floor drains. It is very flexible, strong and resistant to chemical substances.

Stainless steel profiles - The products of the future

They are taking up more space day by day on the market. Due to their materials they can assure you the looks and the covers as well.

The development of the profil market is heading to the metals from the plastics right now. Even if we don't see the process it is going on.

They are recommended: to inside and outside, all type of flooring to decorate or hygienic use.

Transition profiles - under the spell of contrasts

Lots of people like to make big open space without parcelling out the house. In this case good to use different flooring in the kitchen, living room...

But for the different tiles we need something to joint them even if there are some differences between them, or they just don't fit well.

The posterior profiles are strong self-adhesive, their thermal expansion is really good and they are sold in many different colours.

To the carpets and to the laminated floor, woodfloor, ceramic, starts, ends, tiles joints, or just to decorate. They are available in natural, silver, gold, bronze anodised aluminium.

Bendable profiles - wherever the wind blows...

- rounded
- angled
- balcony

The curved form shower looks really nice, especially if you use bendable profiles to the joint of two different tiles.

A joint of the different flooring materials could be also curved, and they also look decorative outside on the arched balconies and stairs.

To these ideas we provide our bendable, specially punched profiles in great solutions.

You can choose the best version from our 30 different curved products!

Movement joints, hygienic profiles, wedges - the „must be” products

To leave out the movement joints, could make serious damages, cracked coatings because of the different expansion of ground and top. This problem is avoidable.

The exacting bathroom is decorative part of the house. Especially if you use hygiene profiles which help you to keep your bathroom bacterium free at the corners and the curves too.

The VIARPROFIL cross-shaped wedges, leveling-wedges, spacers for glass-brick are made from hard plastic. The perfect quality and shape make certain the joints between the tiles and the secure and precise laying of the tiles. The hollow structure gives elasticity for the spacer, it allows expansion-movement of the tiles, so you can let them without care between ceramic tiles.

VIAR extras, the really super fine things

VIARPROFIL
FORMS THAT FIT

- a wide range of flexible profiles
(rounded and “L” aluminium profiles, aluminium profiles for terraces and balconies, in all measures and colours)
- stair nosing profiles in length of 2,5–2,7–3,0m, already in height of 8mm
